

How to Connect Remotely to your Office Computer (Gables Domain)

To remote into your computer from home you will need the Pulse Secure client installed on your home computer and the computer name of your office computer. It is important to remember that your office computer must be turned on in order for you to remote into your computer from home.

1. Open a browser and launch Pulse Secure client by typing in remote.miami.edu. Login in using your Cane ID credentials and follow the prompts.
2. After Pulse Secure client is launched, click on the Start button or the Magnifying Glass and type in **remote** in the search field box

3. Look for **Remote Desktop Connection** and open the application.
4. Type in your full computer name.

5. At the login screen, enter your CaneID credentials and click ok.
