How to Locate Your Computer Name

To remote into your computer from home you will need the Pulse Secure client installed on your home computer and the computer name of your office computer. It is important to remember that your office computer must be turned on in order for you to remote into your computer from home.

Windows 7:
1. Open System by clicking the Start button.
2. Right-click on Computer, and then clicking Properties.
3. Under Computer name, domain, and workgroup settings, you can find your computer name, and its full computer name if your computer is on a domain.

Windows 10:
1. Right-click on the Start button and click Control Panel.
2. Click on System.
3. Under Computer name, domain, and workgroup settings you can find your full computer name.

Mac OS:
1. Click on Apple menu
2. Click on System Preferences
3. Click on Sharing
